### PROJETS

#### Project for End of Semester: Intrusion Detection System with Machine Learning Integration Using Snort

Development of an intrusion detection system based on Snort, enhanced by the integration of machine learning techniques to enhance the accuracy of alerts.

#### OpenVPN Server on AWS Cloud Services

Configuration and deployment of an OpenVPN server on AWS Cloud Services for secure remote access.

#### Blog with User Management

Creation of a dynamic website using Flask and Bootstrap, allowing users to log in, log out, and interact via comments. Additionally, administrative features have been implemented to facilitate blog management, including content creation, modification, and deletion.

### EDUCATION

2024-2023	<b>2nd year of engineering cycle in the Network, Systems, and Programmable Service specialization</b> National School of Applied Sciences, Marrakech
2022-2020	<b>Preparatory cycle</b> National School of Applied Sciences, Marrakech
2020-2019	<b>Baccalaureate in Physical Sciences with French option</b> Azzouzia High School, Marrakech

### FORMATION

Dec. 2023	<b>100 Days of Code</b> Master the <b>Python</b> programming language by building 100 unique projects over 100 days.
Sep. 2023	<b>HCIA-Datacom V1.0 Certificate</b> <b>Routing</b> and switching principles, basic <b>WLAN</b> principles, basic knowledge of <b>network security</b> .

### SKILLS

Html / CSS / Java Script  
C / C++  
Python  
SQL / PHP  
Excel / word / Latex  
Flask  
Docker / swarm / k8s

### LANGUAGES

Arabe	<div></div>
